## Skills

---

**Languages:** JavaScript, TypeScript

**Frameworks:** React, Next.js, Nuxt, Vue.js

**Runtime & Tooling:** Node.js

## Experience

---

**Senior frontend developer** DappRadar, Kaunas, Lithuania April 2022 – Present

- Implemented Web3 features for the world's dapp store. Built reusable, maintainable code using React, Next.js, and Node.js
- Owned and delivered business critical features end to end. Defined requirements with stakeholders, translated them into technical plans, coordinated cross team work, and ensured smooth releases with monitoring and post launch support.
- Collaborated on CI/CD migration from DigitalOcean and Jenkins to GitHub Actions.
- Improved development efficiency by building and maintaining internal tooling (shared components, utilities, and services) used across multiple projects, reducing duplication and increasing consistency.
- Collaborated closely with design to maintain an extensive design system. Worked with designers through Figma and Storybook to ensure UI coherence and streamline implementation across the product.
- Worked on refactoring the Google Analytics strategy to ensure accurate, meaningful, and easy to access data.

**Frontend developer**, Nord Security – Kaunas, Lithuania September 2019 – March 2022

- Collaborated with marketing and design teams to deliver high impact campaigns and promotions on the NordPass website, contributing directly to product growth.
- Rebuilt the product's codebase by introducing reusable React components, reducing technical debt, and driving the adoption of a unified design system.
- Automated the article-publishing workflow by integrating a headless CMS with Gatsby, freeing junior developers to focus on skill development instead of manual blog management.
- Designed and implemented a Google Analytics strategy that enabled the product and marketing teams to base decisions on clean, reliable, and actionable data.
- Mentored two junior developers by delegating appropriate tasks, supporting their development, and maintaining responsibility for the quality of their code.

**Junior developer**, Adapt A/S – Kaunas, Lithuania & Copenhagen, Denmark May 2017 – Sept 2019

- Started career as a backend developer working with PHP, Drupal, and Twig templates, contributing to multiple client projects and gaining foundational experience in web development.
- Transitioned into frontend development after 1.5 years, proactively learning React, JavaScript, and modern CSS to align with the company's evolving tech stack.
- Collaborated with senior developers to deliver several projects using modern frontend technologies, applying best practices and improving code quality.
- Implemented UI components and layout work in React and CSS, ensuring consistency with design specifications and improving user experience.
- Assisted with debugging, maintenance, and feature development across both backend and frontend codebases.

## Education

---

**University College of Northern Denmark** – BSc in Software development

2014 – 2019
